**Borderline** - This potentially relevant result is neither clearly positive nor negative. As with other sensitizations, this result's relevance should be examined in the context of the patient's clinical signs.

**Cross-reactive** - This predicted sensitization has been extrapolated from an existing positive result, considering known patterns of cross-reactivity. References are available upon request.

## Dietary Results

*Your cat tested positive for the following ingredients:*

Oat	Turkey	Soybean
Beef		

Customized Allergy Report Sample

Allergies are a progressive disease. If you don't properly address them now, they will get worse.

**90%**

of pet symptoms improve with diet & hyposensitization\*

**66%**

of pet symptoms improve with hyposensitization alone\*

**50%**

of pet symptoms improve with dietary change alone\*

\*According to a veterinary survey
